

Abbreviations of control units in the CIP: Coding, Individualisation and Programming.

Control units are often designated by an abbreviation. Usually, the abbreviation stands for the system of which the control unit is a part (e. g. the DSC control unit is part of the Dynamic Stability Control).

Some abbreviations are derived from the English words; some are derived from the German meaning. The long forms are primarily German designations; however, they can also be English designations or marketing terms.

Of the many control units in existence, those referred to by abbreviations in the CIP (Coding, Individualisation and Programming) and in diagnosis have been selected for listing here.

The illustration shows the Software Service Station SSS for the Coding, Programming and Individualisation.
